

SAFETY POLICY

ResilTech is committed to provide its customers with products and services that match their requirements and expectations. Customer requirements usually include safety requirements, and for this reason it is indispensable for ResilTech to work in compliance with good practices, applicable standards and related legal obligations.

The ResilTech Top Management has hence extended the Quality Management System by taking the following specific actions related with safety management:

- 1) Establishing and maintaining a Safety Policy which is appropriate for the ResilTech purpose and context.
- 2) Communicating the Safety Policy through the same channels as the Quality Policy.
- 3) Supporting the strategic direction of the Safety Policy, and ensuring the necessary level of independence from the execution processes.

The objectives of the ResilTech Safety Policy are the following:

- 1) Customer focus: to meet the Customer safety requirements, providing the relevant evidences to the interested stakeholders.
- 2) Safety culture: to promote the safety culture among all the persons involved in the safety-related processes; ResilTech pays attention to those persons, because they are the key actors which contribute in reaching safety by correctly applying the ResilTech processes and the required standards.
- 3) Process approach: to promote the definition and the adoption of processes, with the aim of achieving results more efficiently and in a predictive way.

All staff, working in compliance with company procedures and practices, shall act in a spirit of collaboration with the colleagues and with the company, committing to continuous improvement.
